

SMS-682 SwitchBox II

Features

- ◆ Fully Managed or Unmanaged standalone switch/router in a rugged enclosure
 - Industry standard CLI, Web, SNMP Interfaces
 - Extensive MIBs support
- ◆ MIL-STD-38999 connectors with 24 + 2 Ethernet interfaces
 - Up to 20/24 auto negotiating 10/100/1000Base-T Gigabit Ethernet (GbE) ports
 - Optional four optical ports (1000Base-SX)
 - Up to two 10GbE uplink/expansion ports
- ◆ High-performance Layer 2/3+ switching/routing software
 - Extensive IETF RFCs supported
 - Switching, VLANs, Routing, IP Multicast, Tunneling, QoS
 - SSH, SSL, Secure memory erase
 - Wire-speed IPv4/v6 support
- ◆ Comprehensive Built-in Test (BIT) support
 - Power-up, Initiated, and Continuous BIT
- ◆ Enhanced security with PMC-110 CryptoNet™
 - Statefull Firewall (ICSA certified)
 - Network Address Translation (NAT)
 - Access Control List (ACL) filtering
 - Encryption/Decryption/Authentication
 - VPN with secure tunneling (IPSec/L2TP)
 - Intrusion detection and content filtering

- ◆ IPMI capable (roadmap)
 - Health Monitoring (voltage, current & temperature)
- ◆ Industry leading technical and life-cycle management support
- ◆ Operating Environment
 - Natural Convection-cooled chassis -40° to 55°C
 - 0.04g2/Hz vibration per MIL-STD-810E
 - 40G Shock per MIL-STD-810E
 - Wide 18V to 40V input range with 50V transient per MIL-STD-704E
 - Meets MIL-STD-461E for various EMC requirements

Overview

Enabling the vision of Network Centric operations and extending the reach of transformational networks, the SMS-682 SwitchBox II is a GbE multi-layer switch/router that is ideally suited for building Intra-Platform Networks (IPNs) for air, land, and sea vehicles or ground stations. SMS-682 SwitchBox II enables fast, reliable forwarding (switching and routing) of control and data packets with up to 24 wire speed 10/100/1000MB/s interfaces and up to two high-speed 10GB/s uplinks that can be used to connect multiple chassis, cards, or even processors within platform networks.

Figure 1: SMS-682 Integrated Solution Block Diagram

Using star, dual star, mesh and hybrid network topologies, the SMS-682 SwitchBox II provides a flexible cost effective solution that can be used to architect reliable 1 or 10GbE communications infrastructure for current and future networked platforms. Redundancy and fail-over can be implemented using dual star and mesh networks while investment dollars can be retained by implementing hybrid network topologies that co-exist with legacy and/or next generation interconnection strategies. Ready to deploy, the Curtiss-Wright Controls Embedded Computing SMS-682 SwitchBox II allows systems integrators to reduce development costs and Time-to-Market (TTM) by simply connecting the SMS-682 SwitchBox II Ethernet interfaces to the appropriate networked devices, and focusing on the optimal partitioning and segmentation of their application's network.

Designed for Maximum Performance

Allowing system integrators to develop and deploy high-performance switch-fabric based architectures today, the SMS-682 SwitchBox II provides a completely integrated and unified management, control and data plane solution for wire-speed performance of switched GbE traffic. Whether it is small, medium or larger IPNs, the SMS-682 provides unique port combinations that scale from 20 and 24GbE port versions.

The SMS-682 SwitchBox II is completely integrated solution (Figure 1) with 24x 1GbE and 2x 10GbE interfaces with an option of four optical 1GbE ports. Table 1 lists the various port types supported by the SMS-684.

Based on the industry leading Broadcom® StrataXGS® III multi-layer switch, the SMS-682 SwitchBox II is capable of providing up to 24 10/100/1000MB/s Ethernet ports with 64 million packets/second (line rate) aggregate switching capacity. The key features at the core of each Broadcom® StrataXGS® III that facilitate low latency wire-speed performance include 1MB of high-speed fully integrated on-chip packet buffer memory, fast filter processors (FFP) per port, and advanced packet flow control capability per port. The two 10GbE XAU ports can be used to stack routers to enable higher port counts, or they can be used to create high-speed 10GbE backbones.

Table 1: SMS-682 Port Type Specification

Port Type	Specification
10Base-T	802.3 standard
	Automatic (MDI/MDIX) crossover
	Maximum of 100 meters per segment length
100Base-TX	802.3u standard
	Automatic (MDI/MDIX) crossover
	Maximum of 100 meters per segment length
1000Base-T	802.3ab standard
	Automatic (MDI/MDIX) crossover
	Maximum of 100 meters per segment length
1000Base-SX	Full duplex or simplex optics with separate Tx/Rx interfaces
	Multi-mode support
	Core/cladding: 62.5/125 or 50/125
	IEEE 802.3z
10GbE XAU	Signaling supports 10GBASE-CX4
	IEEE 802.3ae

BCM5464 Quad-port 10/100/1000Base-T Gigabit Copper Transceiver

The SwitchBox II solutions utilizes six BCM5464 chips, which each provide four complete 10/100/1000Base-T GbE transceivers integrated on a single monolithic CMOS chip, is a member of Broadcom's QuadSquad™ family of quad GbE PHYs. The BCM5464 is optimized for low-power and small footprint size to enable high-port density applications. The BCM5464's digital signal processor based architecture and advanced power management techniques combine to achieve robust and low-power operation over the existing Category 5 twisted-pair wiring.

Advanced Security

The SMS-682 SwitchBox II can also be configured as a Unified Threat Management (UTM) router that is capable of strong perimeter defense through an ICSA certified firewall. This is achieved with the PMC-110 CryptoNet. This optional security PMC module provides an industrial strength statefull firewall that can protect against multiple evasive attacks. SMS-682 security features include:

- ◆ Statefull firewall (ICSA certified)
- ◆ Access control list (ACL) filtering
- ◆ Network Address Translation (NAT)
- ◆ Encryption/Decryption/Authentication
- ◆ Key generation/management
- ◆ Enables VPN with secure tunneling (IPSec/L2TP)

The PMC-110 CryptoNet connects to the StrataXGS® III multilayer switch through 2GbE interfaces and can be managed through a serial EIA-232 port.

Managed vs. Unmanaged Switches

Both managed and unmanaged versions of the SMS-682 SwitchBox II are available. The unmanaged version functions only as a L2 switch with minimal software and a quick boot time. The managed version is a L2/L3 router with complete managed L2/L3 software, Quality of Service (QoS), IP multicasting, and basic security. Management interfaces include "industry standard" CLI, SNMP, and web for easy configuration and network management. (Refer to Table 2 on page 4 for Management Interfaces and Connection Strategies.)

Table 2: Management Interfaces & Connection Strategies

Interface	Connection	Client
CLI	- EIA-232 - Any in-band Ethernet port	Terminal Program Telnet
Web	- Any in-band Ethernet port	Web Browser
Network Management Station (NMS)	- Any in-band Ethernet port	Standard off the shelf NMS Software

Figure 4: Example J4 cable for SMS-682 – 38999 cable that breaks out two EIA-232 serial port, one 10/100 debug port & a discrete reset interface

Complete Integrated Software Solution

Managed versions of the SMS-682 SwitchBox II provide extensive pre-integrated software that runs on its processor. Major software components include the full suite of Layer 2/3 software protocols required for intelligent switching and routing of IP packets (Figure 5 and Figure 6). Curtiss-Wright Controls also provides extra software features such as declassification, and Built-in Tests (BIT). BIT tests include Power BIT (PBIT), Continuous BIT (CBIT), and Initiated BIT (IBIT). Declassification is a utility that erases the non-essential contents in the Flash File System. This process deletes the routing tables, filters and purges the switch of Ethernet packets and restores default configuration files from flash. This provides an extra layer of memory protection, and the ability to recover default information in the event of corruption.

Accessories

For building networks in the lab environment, Curtiss-Wright Controls provides various cables that can be used with the SMS-682 in the lab environment. Examples of two cables are illustrated in Figure 3 and Figure 4. See Table 6 for all the appropriate variants and cables for the SMS-682 SwitchBox II.

Specifications

Table 3: Overall Feature Specifications

Feature	Specification
Number of Ports	Up to 24x 1GbE ports plus up to 2x 10GbE ports (depending on variant purchased)
Out of Band Ports	10/100Base-TX Ethernet interface for software update
	JTAG support
	EIA-232 serial interface
Packaging	Standalone 6U box with power supply
Dimensions	(L) 11.4 x (W) 9.4 x (H) 3.75
Weight	14.5 lbs
Power	50W
Throughput	64 million packets/second aggregate switching capacity (24-port version)
Capacity	Packet Buffer 2MB pool
	Support for Jumbo packets up to 9KB
	Up to 16,384 Layer 2 MAC addresses
	Up to 4,096 Layer 3 IPv6 routes
	4,096 Virtual LANs supported
	1024 Layer 2 Multicast groups
	Content Aware Processor - 16 internal lookup processors - 4096 flows per processor
Layer 2 Features	Loop free, Transparent bridging
	Rapid Spanning Tree Protocol (RSTP)
	Multiple Spanning Tree Protocol (MSTP)
	VLAN Routing and Support
	LAN information passing via GARP
	VLAN registration passing via GVRP
	Propagation of Multicast registration via GMRP
	Forwarding Multicast traffic using IGMP Snooping
	Increased Bandwidth and load sharing with Link Aggregation
	Support for Port Mirroring
	Support for Rate Limiting on each port

Feature	Specification
Layer 3 Features	Unicast routing protocols like RIP, BGP & OSPF
	Inter VLAN routing
	Quality of Service QoS, in the form of differential services
	Supports both: - Differential Services Code Point DSCP mapping - Per Hop behavior
	Multicast route computation using PIM & DVMRP - SM - sparse mode - DM - dense mode
	Redundancy and Load Sharing through VRRP
General Features	Support for DHCP Server/BOOTP server
	Switch Configuration Save and Restore
	Log file download via TFTP
	Management of Switch through - SNMP - WebNM - CLI
	Secure management interfaces through secure http (SSL) and secure shell (SSH)
	RMON System probe for groups 1 (Statistics), 2 (History), 3 (Alarm), and 9 (Events)
	Power On Built-in Self Test

Table 4: Summary of Hardware Specifications

Feature	Description
Multi-layer switch	Broadcom® StrataXGS® III 565xx series
Management/Control Processor	MPC8245 processor
Memory	256MB SDRAM with ECC, 4MB boot flash
	96MB Flash File System Disk
1GbE Ports	Up to 24
10GbE Ports	Up to 2
Serial Ports	Up to 2 EIA-232
Debug Ports	1 Ethernet port, 1 JTAG connector

Table 5: Summary of Software Specifications*

Feature	Standard
MIB Support	
MIB II	RFC 1213
MIB II for SNMPv2c	RFC 1907, 3418
SNMP Community MIB	RFC 3548
SNMP Message Processing and Dispatching MIB	RFC 3412
SNMP Notification MIB	RFC 3413
SNMP Target MIB	RFC 3413
SNMP User Based Security Model MIB	RFC 3414
SNMP View Based Access Control MIB	RFC 3415
Interface group MIB	RFC 2233
Bridge MIB	RFC 1493
MIB for Ethernet-like interfaces (requires support in hardware)	RFC 2665
VLAN MIB	RFC 2674
Spanning Tree Protocol MIB	RFC 1493
Rapid STP MIB	Draft/Prop MIB
Multiple STP MIB	Prop MIB
Link Aggregation MIB	IEEE 802.3ad, additional Prop MIB
Port-based Network Authentication Control MIB	IEEE 802.1X
IPv4 MIB	RFC 2011, 2013, 2096, Prop MIB
IGMP MIB	RFC 2933
DHCP	Prop MIB
RIP v1/v2 MIB	RFC 1723, 1724, 2453, Prop MIB
Radius Client MIB	RFC 2618
OSPFv2 MIB	RFC 1850, Prop MIB
PIM MIB	RFC 2934, Prop MIB
BGPv4 MIB	RFC 1657, Prop MIB
DVMRP MIB	Prop MIB
VRRP MIB	RFC 2787
Tunnel MIB	Prop MIB
IPv6 MIB	RFC 2465, Prop MIB
MLD MIB	RFC 3019, Prop MIB
RIPv6 MIB	Prop MIB
OSPFV3	Draft, Prop MIB

Feature	Standard
Management & Administration	
SNMP v1/v2c/v3 (Both IPv4 and IPv6 based)	RFC 1155, 1157, 1212, 1213, 1215, 1905, 2089, 2578, 3411, 3412, 3413, 3414, 3415, 3416, 3417 (partial), 3584
CLI (Telnet and console) (both IPv4 and IPv6 based)	-
CLI command completion (using Tab)	-
Context Sensitive Help in CLI	-
Multi-session telnet server	-
Web UI (embedded HTTP server) (both IPv4 and IPv6 based)	RFC 1945
Multiple levels of user privileges (CLI And WebUI)	-
TLS Protocol	RFC 2246
SSL Protocol Version 3.0	RFC 2246
SSH Protocol Architecture	Draft
SSH Transport Layer Protocol	Draft
SSH Authentication Protocol	Draft
SSH Connection Protocol	Draft
MIB save/restore using FLASH	-
MIB save/restore through TFTP	-
Trace route logging	-
Log file upload to remote system	-
IP authorized managers	-
Enterprise OID support	-
Chassis Management	-
Power over Ethernet support	IEEE 802.1af
Statistics	
RMON (1, 2, 3 & 9 groups)	IEEE 2819
Port Mirroring	-
Other	
Broadcast Storm Control	-
Stacking Support	-

Table 6: Recommended Parts List for SMS-682 SwitchBox II

Part Number	Description
Variants	
SMS-682-2020-M5	Managed router, 20-ports 1GbE, Layer 2/3 software, standalone 1 slot 6U chassis with power supply. Good to +71°C degrees ambient.
SMS-682-2124-M5	Managed router, 20-ports 1GbE, 4-ports fast Ethernet, Layer 2/3 software, standalone 1 slot 6U chassis with power supply. Good to +71°C degrees ambient.
SMS-682-2326-M5	Managed router, 20-ports 1GbE, 4-ports optical GbE (SX), 2-ports 10GbE, Layer 2/3 software, standalone 1 slot 6U chassis with power supply. Good to +71°C degrees ambient.
SMS-682-2226-M5	Managed router, 24-ports 1GbE, 2-ports 10GbE, Layer 2/3 software, standalone 1 slot 6U chassis with power supply. Good to +71°C degrees ambient.
SMS-682-2226M5S	Managed router, 24-ports 1GbE, 2-ports 10GbE, Layer 2/3 software. Includes PMC-110 CryptoNet™ with advanced security (firewall, NAT, IPSec, IKE, Cryptography). Standalone 1 slot 6U chassis with power supply. Good to +71°C degrees ambient.
Cable Accessories	
CBL-SMS-682-J1	38999 Break out cable for the SMS-682 SwitchBox II. Breaks out to 12 Cat5e cables with RJ45 interfaces. Keyed for J1. (Lab use only).
CBL-SMS-682-J2	38999 Break out cable for the SMS-682 SwitchBox II. Breaks out to 12 Cat5e cables with RJ45. Note if J3-1 GbE optic cable used, last 4GbE ports will be routed to J3 as optical ports. Keyed for J2. (Lab use only).
CBL-SMS-682-J3-1	Break out cable for the SMS-682 SwitchBox II. Breaks out the last 4GbE ports as optical LC plugs. Keyed for J3. (Lab use only).
CBL-SMS-682-J3-2	Break out cable for the SMS-682 SwitchBox II. Breaks out two 10GbE XAUI ports. Keyed for J3. (Lab use only).
CBL-SMS-682-J4	38999 Break out cable for the SMS-682 SwitchBox II. Breaks out 2x 10/100 Ethernet ports, 2x Serial ports. Keyed for J4. (Lab use only).
CBL-SMS-682-J5	SMS-682 SwitchBox II power cable. Keyed for J5. (Lab use only)

Part Number	Description
Connector Mating Kit	
MKIT-SMS-682-J1245	SMS-682 mating kit for connectors: J1, J2, J4, J5
MKIT-SMS-682-J3	SMS-682 mating kit for J3-1 (1G optical), J3-2 (10G copper)
Maintenance	
MNT-684-0000	Yearly Software Maintenance

Table 7: SMS-682 SwitchBox II Environmental Information

Environmental Test Name	Test Specification/ Category	Test Levels
Temperature, Humidity, Altitude	MIL-STD-810F Method 520.2	-40°C to 55°C; 0 to 10,000ft
Vibration	MIL-STD-810F Method 514.5, Procedure I	PSD .05 - .1g2/Hz, 5-2000Hz
Acceleration	MIL-STD-810F Method 515.5, Procedure I & II	15g
Salt Fog	MIL-STD-810F Method 509.4	per standard
Contamination by Fluids	MIL-STD-810F Method 504	Kerosene, petrol, Hydraulic Oil (mineral), Lubricating Oil (mineral), Lubricating Oil (ester), Corrosion Preventative Fluid, Ethylene Glycol (80 and 50%), NBC Decontamination agents
Sand and Dust	MIL-STD-810F Method 510.4, Procedure I & II	per standard
Rain/ Waterproofness	MIL-STD-810F, Method 506.4, Procedure III	per standard
Explosion Proofness	MIL-STD-810F Method 511.4, Procedure I	per standard
Shock	MIL-STD-810F Method 516.5, Procedure I	30g, 11ms
Voltage Spike	DO-160E, Section 17, Category A	per standard
Conducted Susceptibility	DO-160E, Section 18, Category Z	per standard
Induced Susceptibility	DO-160E, Section 19, Category C	per standard
RF Susceptibility	DO-160E, Section 20, Category Y	per standard
Emission of RF Energy	DO-160E, Section 24, Category M	per standard

Warranty

This product has a one year warranty.
